Ending the Depression Through Planned Obsolescence

By BERNARD LONDON

FRANK A. VANDERLIP, former President of the National City Bank, of New York, characterized this as a stupid depression. He emphasized the fact that millions were suffering amidst glutted markets and surpluses.

The new paradox of plenty constitutes a challenge to revolutionize our economic thinking. Classical economics was predicated on the belief that nature was niggardly and that the human race was constantly confronted by the spectre of shortages. The economist Malthus writing in 1798 warned that the race would be impoverished by an increase in population which he predicted would greatly exceed gains in the production of foodstuffs.

However, modern technology and the whole adventure of applying creative science to business have so tremendously increased the productivity of our factories and our fields that the essential economic problem has become one of organizing buyers rather than of stimulating producers. The essential and bitter irony of the present depression lies in the fact that millions of persons are deprived of a satisfactory standard of living at a time when the granaries and warehouses of the world are overstuffed with surplus supplies, which have so broken the price level as to make new production unattractive and unprofitable.

Primarily, this country and other countries are suffering from disturbed human relationships.

Factories, warehouses, and fields are still intact and are ready to produce in unlimited quantities, but the urge to go ahead has been paralyzed by a decline in buying power. The existing troubles are man-made, and the remedies must be man-conceived and man-executed.

In the present inadequate economic organization of society, far too much is staked on the unpredictable whims and caprices of the consumer. Changing habits of consumption have destroyed property values and

opportunities for employment. The welfare of society has been left to pure chance and accident.

In a word, people generally, in a frightened and hysterical mood, are using everything that they own longer than was their custom before the depression. In the earlier period of prosperity, the American people did not wait until the last possible bit of use had been extracted from every commodity. They replaced old articles with new for reasons of fashion and up-to-dateness. They gave up old homes and old automobiles long before they were worn out, merely because they were obsolete. All business, transportation, and labor had adjusted themselves to the prevailing habits of the American people. Perhaps, prior to the panic, people were too extravagant; if so, they have now gone to the other extreme and have become retrenchment-mad.

People everywhere are today disobeying the law of obsolescence. They are using their old cars, their old tires, their old radios and their old clothing much longer than statisticians had expected on the basis of earlier experience.

The question before the American people is whether they want to risk their future on such continued planless, haphazard, fickle attitudes of owners of ships and shoes and sealing wax.

What the people can afford is very different at a time when the majority are gainfully employed than it is in a period when perhaps ten million are without gainful employment. The job of modern management is to balance production with consumption—to enable one large group, like the factory workers in the cities, to exchange the products of their hours of labor for the output of farmers. The prevailing defeatist assumption that depression and unemployment must continue because we have too much of everything, is the counsel of despair.

Society is suffering untold loss in foregoing the workpower of ten million human beings. The present deadlock is the inevitable result of traveling along blind alleys. Chaos must unavoidably flow from an unplanned economic existence.

In the future, we must not only plan what we shall do, but we should also apply management and planning to undoing the obsolete jobs of the past.

This thought constitutes the essence of my plan for ending the depression and for restoring affluence and a better standard of living to the average man.

My proposal would put the entire country on the road to recovery, and eventually restore normal employment conditions and sound prosperity. My suggested remedy would provide a permanent source of income for the Federal Government and would relieve it for all time of the difficulties of balancing its budget.

Briefly stated, the essence of my plan for accomplishing these much-to-be-desired ends is to chart the obsolescence of *capital* and consumption goods at the time of their production.

I would have the Government assign a lease of life to shoes and homes and machines, to all products of manufacture, mining and agriculture, when they are first created, and they would be sold and used with the term of their existence definitely known by the consumer. After the allotted time had expired, these things would be legally “dead” and would be controlled by the duly appointed governmental agency and destroyed if there is widespread unemployment. New products would constantly be pouring forth from the factories and marketplaces, to take the place of the obsolete, and the wheels of industry would be kept going and employment regularized and assured for the masses.

I am not advocating the *total destruction* of anything, with the exception of such things as are outworn and useless. To start business going and employ people in the manufacture of things, it would be necessary to destroy such things in the beginning—but for the first time only. After the first sweeping up process necessary to clean away obsolete products in use today, the system would work smoothly in the future, without loss or harm to anybody. Wouldn't it be profitable to spend a sum of—say—two billion dollars to buy up, immediately, obsolete and useless buildings, machinery, automobiles and other outworn junk, and in their place create from twenty to thirty billion dollars worth of work in the construction field and in the factory? Such a process would put the entire country on the road to recovery and eventually would restore normal employment and business prosperity.

An equally important advantage of a system of planned obsolescence would be its function in providing a new reservoir from which to draw income for the operation of the Government. The actual mechanism involved would be briefly something like this:

The people would turn in their used and obsolete goods to certain governmental agencies, situated at strategic locations for the convenience of the public. The individual surrendering, for example, a set of old dining room furniture, would receive from the Comptroller or Inspector of such a Station or Bureau, a receipt indicating the nature of the goods turned in, the date, and the possible value of the furniture (which is to be paid to him in the future by the Government). This receipt would be stamped in a receipt book with a number, which the individual would have received when he first brought in an obsolete article to be destroyed. Receipts so issued would be partially equivalent to money in the purchase of new goods by the individual, in that they would be acceptable to the Government in payment of the sales tax which would be levied as part of my plan.

For example, a consumer purchasing a \$100 radio, on which the sales tax is 10 per cent or \$10, the purchaser would pay cash for the radio, but could offer \$10 worth of receipts for obsolete merchandise turned in, in payment of the sales tax. The merchant or manufacturer would have to accept these receipts for this purpose, and would turn them back to the Government in payment of the sales tax, which must be borne ultimately by the consumer in any event.

Under this system, the purchaser would feel he had been paid for the used-up article which he turned in to the Government, yet the Government would not have had to pay a cent of cash for the goods so surrendered. As a result of the process, nevertheless, the wheels of industry would be greased, and factories would be kept busy supplying new goods, while employment would be maintained at a higher level.

I maintain that taxes should be levied on the people who are retarding progress and preventing business from functioning normally, rather than as at present on those who are cooperating and promoting progress. Therefore I propose that when a person continues to possess and use old clothing, automobiles and buildings, after they have passed their obsolescence date, as determined at the time they were created, he should be taxed for such

continued use of what is legally “dead.” He could not deny that he does not possess such goods, as he might hide his income to avoid paying an income tax, because they are material things, with their date of manufacture known. Today we penalize by taxation persons who spend their money to purchase commodities, which are necessary in order to create business. Would it not be far more desirable to tax instead the man who is hoarding his money and keeping old and useless things? We should tax the man who holds old things for a longer time than originally allotted.

Under the present estate and inheritance tax system, the State has to wait an indefinite period, and allow the owner of a building or commodity to keep on earning and adding more to his fortune until he dies, before it can collect its inheritance tax. With obsolescence of merchandise computed in advance, the Government will collect when the article dies, instead of when its owner dies.

Moreover, the present method of collecting revenue under the income tax is speculative and uncertain, because the profits of industry and business, upon which the income tax is based, are subject to vast fluctuations.

If the plan I propose is adopted, there will be a source of *permanent income* to the State from goods and merchandise in existence, and which are bound to continue to exist. Through a process of checking control of what the manufacturer sells to the dealer, and through reports by retailers of what they sell to the consumers, the Government will know by the end of the year just what income it will be sure of getting, and this amount it will be paid irrespective of whether people are making big profits or not.

My plan would rectify the fundamental inequalities of our present economic system, in which we follow a hit-or-miss method, one getting much more than he needs or can use, and another less or nothing. We should learn to use our material resources so that all can partake of them, yet so that none will be any poorer or worse off than today.

In our present haphazard organization, the product of the worker’s toil continues to benefit and produce income for its owner long after the one whose sweat created it has spent and exhausted the meagre compensation he received for his labor.

The worker's wages are exhausted in a week or a month in the purchase of food, clothing and shelter. He has for himself little that is permanent to show for his hours of toil, whereas the owner of the building or machine which the worker's labor helped to construct has a unit of capital goods which will last for years or even decades. The man who performed the work received as compensation only enough to purchase comfort and sustenance for a short time, and he must continue to labor if he wishes to go on living. The product of the worker's hand, however, is a semi-permanent thing and produces income for its owner for an indefinite period of years. In the end, not only is the original cost of production repaid and interest yield on the investment, but far more besides. This very lasting quality of the product of the worker's toil results to his disadvantage, for a time comes such as we are passing through today, when there is an excess of capital goods and the worker is told: "We have enough production of wealth; we are going to use up what we have and need no more for the present. You laborer, go and find work elsewhere. We do not need you now."

And so the worker, whose sweat wrought this vast store of material goods, suffers from poverty and want, while the country is glutted with everything. My plan would correct this obviously inequitable situation by arbitrarily limiting the return to capital, to a stipulated period of years, after which the benefits would revert to the people.

The situation in which the country now finds itself, in which there is poverty amidst plenty, is well illustrated by the analogy of a great giant standing in a pool of fresh water up to his lips, yet crying out that he is thirsty because he is paralyzed and cannot stoop to drink. His muscles must be enabled to relax, for him to bend down in order that he may quench his thirst. So, too, the paralysis which prevents our economic society from consuming the abundant supplies of raw materials and manufactured commodities which glut our markets must be cured before normal conditions can be restored.

Furniture and clothing and other commodities should have a span of life, just as humans have. When used for their allotted time, they should be retired, and replaced by fresh merchandise. It should be the duty of the State as the regulator of business to see that the system functions smoothly, deciding matters for capital and labor and seeing that everybody is sufficiently employed. The Government will have the power to extend the

life of articles for a year or two (upon agreed terms), if they are still useable after their allotted time has expired and if employment can be maintained at a high peak without their replacement.

If a machine has been functioning steadily for five years or so, it can fairly be considered dead—dead to the one who paid his money for it—because he has had all the use of it during those five years and it will have paid for its life by its earnings in the five-year period. Then it should go to the workmen, through the State; its life can be prolonged if the factories are already busy and there are no unemployed. But if by its replacement idle workers can be given jobs and closed factories reopened, then this machine should be destroyed and new (and probably improved) apparatus produced in its place.

The original span of life of a commodity would be determined by competent engineers, economists and mathematicians, specialists in their fields, on behalf of the Government.

In the course of 30 years under this arrangement, most construction and production would undergo a fundamental change for the better, as old, dilapidated and obsolete buildings and machines disappeared and new ones appeared in their place.

During this period some manufactured commodities would have been destroyed and replaced 15 times, others 10 times, still others 5 times, etc., depending on the span of life allotted to each, in order for it to earn sufficient for its purpose before it dies. We must work on the principle of nature, which creates and destroys, and carries the process of elimination and replacement through the ages. There would be no overproduction, were this method adopted, for production and consumption would be regularized and adjusted to each other, and it would no longer be necessary to send our surplus goods to find outlet in foreign markets. We would not then, as we do today, have to sell these goods on credit and later have to beg for our money, which in the long run foreign nations do not want to repay anyway.

In the description of things under the present organization of society, we continually make use of a system of weights and measures. Thus, a commodity is evaluated in terms of size—shape, weight, value, etc. The weights and measures we use are standardized and regulated by the Government so that they may not be violated. But, though we may not

realize it, this system is incomplete because in the description of things it omits consideration of two elements which are equal in importance to those in everyday use in determining real values. These are *life* and *time*, life with respect to the commodity produced, and time, the period it should last.

If we add the elements of life and time to our measurement of what we produce, and say that the life of this automobile shall be not more than 5 years, or the life of this building shall last not more than 25 years, then, with the addition of our customary measurement of these commodities, we will have a really complete description of them right from the beginning. And, when capital purchases the automobile or the building, it will be doing so only for that limited period of years, after which the remaining value left in the product will revert to labor, which produced it in the first place, and which thus will receive its rightful share in the end, even if it did not do so in the beginning.

Miracles do not happen. They must be planned in order to occur. Similarly in this time of economic crisis, we must work out our own salvation.

If we can afford to sink ships, that cost millions of dollars to construct, merely for the purpose of giving target practice to the gunner, then surely we can afford to destroy other obsolete and useless products in order to give work to millions and pull the country out of the dire catastrophe in which it is now wallowing.

At the present time our country has plenty of everything, yet people are in want because of a breakdown in distribution, an inadequate division of the fruits of labor. Worn-out automobiles, radios and hundreds of other items, which would long ago have been discarded and replaced in more normal times, are being made to last another season or two or three, because the public is afraid or has not the funds to buy now. The Government should be enabled to advance a sum of money to certain Trust Agencies to purchase part of these obsolete buildings and machines and clothing. They should be thrown into a junk pile, and money lent toward creating new buildings, machines and commodities.

The State can lend money for the erection of new buildings at an interest rate of no more than 2½ or 3 per cent. Suppose, though, that new builders or owners of the buildings pay 5 or 5½ per cent interest. Two and a half per

cent of this would go to the Government as interest and $2\frac{1}{2}$ or 3 per cent for amortization or to a sinking fund, out of which to pay back for the construction of the building within 25 or 30 years, computed on a basis of compound interest. At that time, the building can be destroyed and a new one erected, with resultant stimulus to employment. The original building in the intervening years would have served its purpose and fairly repaid its owner.

Capital should be willing to invest its wealth on a $2\frac{1}{2}$ or 3 per cent interest basis under such circumstances, because the investment will be safe, steady and permanent. In the present economic chaos, investments at great interest rates are in jeopardy and, while at present lenders are getting large returns for their money, their capital is in constant danger of being wiped out altogether.

The tax-collecting machinery at present used by the Government could readily be converted into the media for carrying into operation the system here proposed. It could be used with the same force and effect, and new laws passed concerning everything produced, just as our present excise and tariff laws cover in their fixing of rates thousands of individual items and categories. Such a means of solving our economic problem could be brought into operation quickly and in a few months the machinery of administration perfected so that thousands of people could be put back to work within a comparatively short time.

If this plan were in operation, speculators would not acquire fortunes simply by manipulating and creating false values or synthetic wealth. If it were decreed that the life of wheat were to be no more than two years, for example, no man would buy the grain solely for speculation, thus creating an artificial market and holding a club over the farmer's head, as today. He would not dare because he would know that he would have to pay the Government a tax on the wheat after it had lived its legal life and this would make it unprofitable or at least highly dangerous to buy speculatively and hold for the future.

The widespread suffering from unemployment and want in this country today is a symptom of a fundamental maladjustment—a sickness, if you like, in our body economic. Almost every sickness can be cured, provided we get the right doctor to diagnose the case and prescribe the proper

medicine, but the patient must take the medicine in order to get well. My plan is in essence a prescription for the relief and cure of the ailments from which our economic organization is today suffering.

Of course, the inauguration of such a system of planned obsolescence will be opposed by many merely because it is new, for it is hard for us to abandon our old notions and adjust ourselves to a new way of thinking. Unlike most changes for the good of the masses, however, this scheme need not involve much hardship, strife or suffering. That is not necessary. With a reasonable amount of common sense used, the plan ought gradually to work smoothly without much loss to anybody. In war-time we conscript the flower of our country's manhood, and send them to the front to fight and often be destroyed. If such drastic procedure is deemed wise and necessary in the crisis of war, would it not be far more logical and profitable in our present emergency to conscript the dead things—material, not human—such as obsolete buildings, machinery and outmoded commodities, and send them to the front to be destroyed in the war against depression, thus saving the country from economic chaos by providing work?

It is far cheaper to destroy useless and obsolete goods now, and perhaps some of our synthetic wealth as well, than to risk destroying far more priceless assets, such as human life, and undermining the health and confidence of the people, by continuing to fight the depression with our old, slow and costly methods.

Even in the present organization of our economic society, we recognize in many instances the necessity of destroying some of our wealth in order to increase it. For example, coal is wealth, but it is burned up and destroyed daily in locomotives, furnaces and other devices in order to create power to drive machinery and manufacture goods. Similarly, oil is wealth, but to serve its purpose it must be used and consumed in the engines of automobiles and the whirring wheels of factories. Grain is wealth, but we destroy it by feeding it to cattle, by consuming it ourselves, and by scattering it on the ground as seed to produce more grain. It is by this process that people live, function and create material goods.

Wealth may be compared to our language. Although we use our language every day, it does not get used up. On the contrary, new words and idioms

are constantly being added to the national vocabulary, and the language increases in usefulness the more it is spoken, instead of deteriorating.

In olden times, only a few chosen ones, such as kings and priests and nobles, could read and write. The rest of the people were kept in ignorance and poverty. Today, with our standardized and simplified grammar and our mass education, the benefits of literacy are available to everybody, to rich and poor alike.

Such a condition should exist also with respect to the enjoyment of wealth. A minimum standard should be created for everyone, and rich and poor, old and young should participate in its benefits, and profit from its use and management.

Our economic society has advanced little from Medieval times in the distribution of our wealth. We still continue on the basis of our old theories and notions that only the chosen ones should enjoy it.

There is as much wealth in existence as there is time, but people do not visualize it. Wealth, like food, must be digested for human beings to be able to live, function and create—in other words, to produce more wealth. If we want to acquire new wealth, the supply lines must be drained so that fresh commodities can come in. If there are stale goods left in the lines, the fresh supply must force them out.

The cause of our present stagnation is that the supply line or arteries furnishing the needs of the country are clogged with obsolete, outworn and outmoded machinery, buildings and commodities of all kinds. These are obstructing the avenues of commerce and industry and are preventing new products from coming through. There is little demand for new goods when people make their old and worn-out things do, by keeping them longer than they should.

We need to apply better managerial foresight to public affairs. I contend that any business or corporation, public or private, which operates and expects to get an income of several billions of dollars a year from its operations, deserves much attention, and requires thoughtful planning, in order to perfect the machinery of its organization. The aim should be to make it function smoothly in order to satisfy the self-supporting multitudes,

by providing them with regular employment at a living wage which will assure the American standard of living.

Such a socially responsible system, which is anxious for the well-being of all of its citizens, is on a vastly sounder and more permanent basis than one which allows business merely to take out profits without improving the organization with new methods and without renewing the equipment.

I maintain that with wealth should go responsibility. Too many nowadays regard wealth as a license to freedom and immunity from obligation to the people. Such irresponsible possessors of wealth are shirkers, who tend to make all of us poorer.

Summarizing the benefits which would accrue to this nation and to the world at large if my plan were adopted and put into effect, it would:

1. Bring order out of the chaos now disrupting the whole economic and social organization.
2. Organize and regularize opportunities for employment.
3. Obviate the tremendous social waste of making no use of the workpower of millions of men and women (who are compelled to stay idle). In this connection, it is significant to note that “the cost of the present depression will very probably exceed 50 billions of dollars” (a staggering amount), according to Malcolm C. Rorty, business executive and statistician, writing in a recent issue of the *Harvard Business Review*.
4. My plan would take Government finances out of their present speculative status and would put Government income on a more stable basis, by receiving annually at least between 25 and 50 per cent of the net income of all the buildings, machinery and other commodities which have been declared obsolete after their allotted time, and nevertheless allowed to function longer in the event there is ample employment.

Transcriber's Notes

- pg 11 Changed: their allotted time has expired
to: their allotted time has expired
- pg 19 Changed: for the wellbeing of all
to: for the well-being of all

***** END OF THE PROJECT GUTENBERG EBOOK ENDING THE
DEPRESSION THROUGH PLANNED OBSOLESCENCE *****

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg™ License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg™ electronic works

1.A. By reading or using any part of this Project Gutenberg™ electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg™ electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg™ electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg™ electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg™ electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg™ electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg™ electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg™ mission of promoting free access to electronic works by freely sharing Project Gutenberg™ works in compliance with the terms of this agreement for keeping the Project Gutenberg™ name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg™ License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg™ work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg™ License must appear prominently whenever any copy of a Project Gutenberg™ work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg™ electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg™ trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg™ electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg™ License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg™ License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg™.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg™ License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg™ work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg™ website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg™ License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg™ works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg™ electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg™ works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg™ trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg™ work, (b) alteration, modification, or additions or deletions to any Project Gutenberg™ work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg™

Project Gutenberg™ is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg™'s goals and ensuring that the Project Gutenberg™ collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg™ and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg™ electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg™ concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg™ eBooks with only a loose network of volunteer support.

Project Gutenberg™ eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg™, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
